

Diagnosis Master Category List, 2016

The [Table](#) displays diagnosis categories according to the 2016 National Center for Health Statistics (NCHS), Division of Health Care Statistics (DHCS), Diagnosis Master Category List (DMCL), a classification scheme that can be used across inpatient and ambulatory settings when analyzing data. The DMCL is based on the *International Classification of Diseases, 10th Revision, Clinical Modification* (ICD–10–CM). Nearly 70,000 ICD–10–CM codes exist, which necessitates the creation of a smaller number of diagnosis categories that can be used in health care research for presenting clinically meaningful estimates of health data.

The intent of the DMCL is to include categories appropriate for use across both inpatient and ambulatory settings. Thus, it includes categories that reflect diagnosis items collected on the [patient record forms](#) (PRF) for the National Ambulatory Medical Care Survey (NAMCS) and the National Hospital Ambulatory Medical Care Survey (NHAMCS), and incorporates information from older diagnosis classification schemes, based on the *International Classification of Diseases, Ninth Revision, Clinical Modification* (ICD–9–CM), and used for [National Hospital Discharge Survey](#) and [NAMCS–NHAMCS](#) data. Additionally, the DMCL contains new categories and adjusts to the change from ICD–9–CM to ICD–10–CM.

The process of creating the DMCL involved bimonthly meetings with a DHCS workgroup consisting of subject-matter experts, including medical systems specialists, physicians, statisticians, health services researchers, and programmers. Initially, a combined list of diagnosis categories was created taking categories from older diagnosis classification schemes (see information above). Then, the workgroup discussed each diagnosis category to determine whether it was still appropriate to include. The workgroup additionally discussed the possibility of adding new diagnosis categories based on research relevance and interest. Additionally, diagnosis items collected on the NAMCS–NHAMCS PRF were all included. After the first draft of the DMCL was finalized, two medical systems specialists assigned ICD–10–CM codes corresponding to each category, shown in the [Table](#). After the two medical systems specialists agreed on code assignments, analysis was conducted by applying the first draft of the DMCL scheme to hospital and ambulatory health care data and comparing frequencies across all settings. Categories with low or high counts across all settings were discussed by the workgroup; for low-count categories, removing the categories was discussed, and for high-count categories, breaking them out into more specific groups within the category was discussed.

The DMCL uses all ICD–10–CM codes and classifies them into 339 mutually exclusive categories. The DMCL will slightly change each year to account for annual changes to the ICD–10–CM coding system. This list was based on the 2016 ICD–10–CM coding system.
