Table. Percentage of office-based physicians using any electronic health records or electronic medical records, physicians that have a basic system, and physicians that have a certified system, by state: United States, 2014

State	Any EHR or EMR[1] system	Basic system	Certified system
Wisconsin	91.9[†]	73.5[†]	82.5
Wyoming	90.1	49.1	76.8

[†]Percentage is significantly higher than national percentage ($p < 0.05$).

[‡]Percentage is significantly lower than national percentage ($p < 0.05$).

[1]EHR is electronic health record, EMR is electronic medical record.

NOTE: A basic system is a system that has all of the following functionalities: patient history and demographics, patient problem lists, physician clinical notes, comprehensive list of patients' medications and allergies, computerized orders for prescriptions, and ability to view laboratory and imaging results electronically. Having a certified system was defined by physicians answering "yes" to having a current system that "meets meaningful use criteria defined by the Department of Health and Human Services." For more information on certified systems and meaningful use criteria, go to the Centers for Medicare & Medicaid Services website for the Medicare and Medicaid EHR Incentive Programs (https://www.cms.gov/ehrincentiveprograms). Data for overall includes all states and the District of Columbia.
